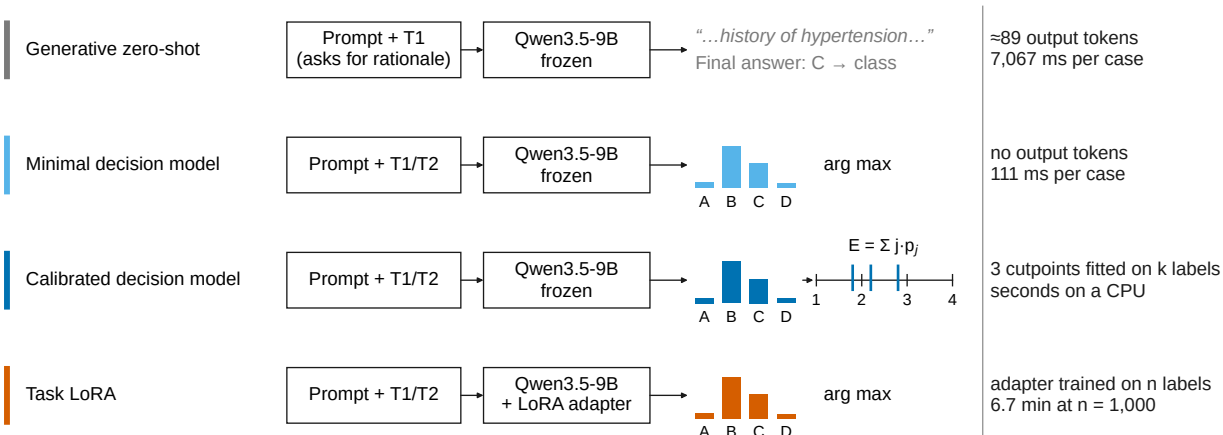
a)

Cohort	Role	Adaptation labels drawn from	Evaluation set
MOVER, USA	Development source	45,994 development operations	4,000 operations (test subset)
Local specialty cohort, China (abdominal tumor surgery > 1 h)	Temporal validation	4,326 operations, 2020–2024	2,753 operations, 2025–2026
VitalDB, Korea	Second site	4,357 training operations	1,885 operations (test split)

Inputs: T1, structured preoperative variables in all cohorts. T2, T1 plus preoperative text (local preanesthesia note; VitalDB diagnoses and tests; MOVER exploratory).

b)



All arms use one base model. Evaluation: quadratic-weighted κ against the recorded ASA class, exact accuracy, ASA IV–V recall, latency and labels needed.
